

Contents

Zhai G. and Michel A.N. Generalized practical stability analysis of discontinuous dynamical systems	5
Koko J. Newton's iteration with a conjugate gradient based decomposition method for an elliptic PDE with a nonlinear boundary condition	13
Kaczorek T. Infinite eigenvalue assignment by an output feedback for singular systems	19
Li Y., Kummert A. and Frommer A. A linear programming based analysis of the CP-rank of completely positive matrices	25
Madi M. Closed-form expressions for the approximation of arclength parameterization for Bézier curves	33
Bartoszewicz A. and Molik T. ABR traffic control over multi-source single-bottleneck ATM networks	43
Łeski J. Kernel Ho-Kashyap classifier with generalization control	53
Tan Y. Time-varying time-delay estimation for nonlinear systems using neural networks	63
Bouthiba T. Fault location in EHV transmission lines using artificial neural networks	69
Karcz-Dulęba I. Asymptotic behaviour of a discrete dynamical system generated by a simple evolutionary process	79
Mesghouni K., Hammadi S. and Borne P. Evolutionary algorithms for job-shop scheduling	91
Gao F., Li X., Wang X. and Wee W.G. Gradient flow optimization for reducing blocking effects of transform coding	105
Węgrzyn A., Karatkevich A. and Bieganski J. Detection of deadlocks and traps in Petri nets by means of Thelen's prime implicant method	113
