

Contents

Invited papers

Zerz E. Behavioral systems theory: A survey	265
Bauer P. H. New challenges in dynamical systems: The networked case	271
Owens D.H., Daley S. Iterative learning control – monotonicity and optimization	279
Rabenstein R., Petrausch S. Block-based physical modeling with applications in musical acoustics	295
Zięba T., Uciński D. Mobile sensor routing for parameter estimation of distributed systems using the parallel tunneling method	307

Contributed papers

Hunger M., Marienfeld D. New self-checking Booth multipliers	319
Yarmolik S. Address sequences and backgrounds with different Hamming distances for multiple run March tests	329
Sawerwain M., Gielerak R. Natural quantum operational semantics with predicates	341
Molchanov P., Totsky A. Application of triple correlation and bispectrum for interference immunity improvement in telecommunications systems	361
Halawa K. Determining the weights of a Fourier series neural network on the basis of the multidimensional discrete Fourier transform	369
Hładowski Ł., Cichy B., Gałkowski K., Rogers E. On the development of SCILAB compatible software for the analysis and control of repetitive processes	377
Banerjee S. Immunotherapy with interleukin-2: A study based on mathematical modeling ..	389
Yang Y., Huang S., Rao N. An automatic hybrid method for retinal blood vessel extraction	399
Petruseva S. Emotion learning: Solving a shortest path problem in an arbitrary deterministic environment in linear time with an emotional agent	409
