

## CONTENTS

<b>Tagade P.M. and Choi H.-L.</b> A dynamic bi-orthogonal field equation approach to efficient Bayesian inversion	229
<b>Kaczorek T.</b> Reduced-order perfect nonlinear observers of fractional descriptor discrete-time nonlinear systems	245
<b>Gupta S. and Smita</b> The effect of viscosity and heterogeneity on propagation of G-type waves.....	253
<b>Zhirabok A., Shumsky A., Solyanik S. and Suvorov A.</b> Fault detection in nonlinear systems via linear methods	261
<b>Przybylski M. and Putz B.</b> D* Extra Lite: A dynamic A* with search-tree cutting and frontier-gap repairing	273
<b>Domański P.D. and Ławryńczuk M.</b> Assessment of the GPC control quality using non-Gaussian statistical measures.....	291
<b>Langowski R. and Brdys M.A.</b> An interval estimator for chlorine monitoring in drinking water distribution systems under uncertain system dynamics, inputs and chlorine concentration measurement errors .....	309
<b>Leska M., Aschemann H., Melzer M. and Meinert M.</b> Comparative calculation of the fuel-optimal operating strategy for diesel hybrid railway vehicles .....	323
<b>Saha S. and Roy P.K.</b> A comparative study between two systems with and without awareness in controlling HIV/AIDS .....	337
<b>AbouEisha H., Calo V.M., Jopek K., Moshkov M., Paszyńska A., Paszyński M. and Skotnicki M.</b> Element partition trees for $h$ -refined meshes to optimize direct solver performance. Part I: Dynamic programming .....	351
<b>Baek J., Dudina O. and Kim C.</b> A queueing system with heterogeneous impatient customers and consumable additional items .....	367
<b>Vasiliu L., Pop F., Negru C., Mocanu M., Cristea V. and Kolodziej J.</b> A hybrid scheduler for many task computing in big data systems .....	385
<b>Rybarczyk A., Hertz A., Kasprzak M. and Blazewicz J.</b> Tabu search for the RNA partial degradation problem	401
<b>Zuo C., Wu L., Zeng Z.-F. and Wei H.-L.</b> Stochastic fractal based multiobjective fruit fly optimization .....	417
<b>Bonollo M., Di Persio L., Mammi L. and Oliva I.</b> Estimating the counterparty risk exposure by using the Brownian motion local time.....	435
